### RATIONALE

Education and training for employment, such as Technical and vocational education and training (TVET) has been one of the priority areas of the SEAMEO and ASEAN member states as reflected in Priority 4 of SEAMEO and Strategy 4 of ASEAN. The member countries believe that through access to quality TVET, students and trainees will be equipped with necessary skills to enter labor market thus addressing the issue of unemployment and enhance economic and social development. One of the key aspects in education and training is quality of teaching and learning that we continuously explore and enhance for improving the transfer of knowledge, skills, and attitudes that eventually can improve their job performance in the workplace.

This regional forum is meant for sharing and discussing “good” practices in teaching and learning, including the engagement of various stake holders that have been proven to work in certain context which is reflected in the success of accomplishing the performance indicators set by the education or training providers. Various contexts have been selected, among others are Singapore through the presentation of ITE (Institute of Technical Education) model and Brunei Darussalam through IBTE (Institute of Brunei Technical Education) and PPK (Pusat Pembangunan Kapasiti/ Centre for Capacity Building) model, and Germany through the Dual system.
